# QUINCY

Quincy, Illinois, is very properly known as the "Gem City". It was settled in 1825 by Governor John Wood, and to day counts her population at 40,000. Naturally beautiful, it stands proudly on the top of a high bluff, and looks down one hundred and forty five feet upon the "Father of Waters", the grand old Mississippi, which shimmers by. Much of its beauty is due to the artistic constructiveness of Mr. John Batchy, the architect, who has given us those beautiful residences in Park Place, besides the Gem City Business College and many other handsome public and private buildings. Baldwin Park has become a feature of Quincy, and is already well-known. The Soldiers' and Sailors' Home, built by the State of Illinois, at a cost of several million dollars, is a magnificent institution, and gives friendly shelter to over a thousand veterans.

Quincy contains over four hundred industrial enterprises, the largest probably being the foundries, which have an annual output of over 120,000 stoves. Electricity is used quite prominently here: Street cars are run by it; the city is lighted by it; and many factories prefer it to steam. The railroad facilities are very good, being an important junction point for three lines of the great Burlington Route, which runs thirty-four passenger trains in and out of Quincy every twenty-four hours. One of its lines runs through East and West, and two North and South.
